

Practice Problems

1. Consider the following traditional loop in C:

$A[450] = i + A[360];$

$j = k + B[257];$

Identify the MIPS assemble code where $A = \$s1$, $i = \$s2$, $j = \$s3$, $k = \$s4$, $B = \$s5$ and translate the assembly instructions into machine instruction.

2. Convert the following into MIPS:

(a) $f = (g + h) - (i + j)$

Where (f-j) is in $\$s0$ to $\$s4$

(b) $g = h + A[8]$

Where g is in $\$s1$, h is in $\$s2$ and base address of A is in $\$s3$.

(c) $A[12] = h + A[9]$

where h is in $\$s2$, base address of A is in $\$s3$.

(d) $g = h + 100$

Where g and h is in $\$s2$ and $\$s3$ respectively
